The cartons, holding a dozen eggs each. boy with only a few hens will hardly One box was full of white-shelled be able to do any shipping on his own account, but must depend on his and packed with the small end down. home market. There are, however, The other held brown-shelled eggs. several ways in which he can get a some cartons being light brown, and little more than market prices for his others dark brown. The clerk smiled

One way is to arrange with your home dealer to furnish him strictly to get them. Orders waiting for them fresh eggs, graded and guaranteed. for his finest class of trade. Any grocer likes to get eggs that he knows he can recommend, and is willing to pay a good price for the same. As many town customers buy their eggs just a dozen at a time, it adds to the attractiveness and salability of your goods if they are put up in neat cartons holding just that number.

Of course your eggs must be clean. If your hens are of several kinds, you are likely to get eggs that are not uniform in color. Sort them so as to put each color by itself. If you have never tried this plan, you have no idea how much nicer your eggs will look, and anything that adds to their appearance helps your price.

Not long ago the following little every-day occurrence was noted in a grocery where many eggs were being brought in. A great bucketful had been offered for sale, and the clerk was busy counting them out. They were like Joseph's coat, of "many colors," but it is to be hoped his coat was not like them in being stained

"Anything with a shell on passes for an egg with some folks," grumbled the disgusted clerk, as he gingerly fished out two or three specimens that were most indisputable "old," and laid them carefully to one side. "If these old things didn't come out of a last year's hen's nest I'll miss my guess." | willing to pay from five to ten cents At last he finished his counting, and a dozen more than the regular marreturned to the counter to settle with ket price for eggs that they know will

DESSERTS OF

Tendency to Eat Meats and Other Heavy Foodstuffs During the Summer Months is Rapidly Passing, Says a Writer.

FRUIT

Fresh fruits play an important part in the dietary of people of highest culture and refinement, those who affect beautiful and harmonious simplicity, combined with simple, wholesome and appetizing dishes. They are a delight to the eye, delicious to taste, and easy to prepare in divers agreeable ways.

It is a mistake to regard fruits as mere accessories to idealize an otherwise too-solid and realistic dietary. While fruits differ very materially from such concentrated food as the flesh of animals, they are akin to the cereals and grains, and combined with them will give every element required as building material for the body; and the fact that they are of a lighter, less condensed form is evidence of their superiority over the grosser mabrought in. There were two boxes of terials, too rich in nitrogen and fleshforming elements when consumed alone and in quantities that are in excess of the requirements of the indi-

eggs, clean as pearls, uniform in size, During the summer, especially, it is very necessary to maintain harmony and a healthy performance of the digestive functions in order to become one of the enviable serene, self-poised individuals so rarely met, but so soothing and refreshing to the overfed, over-stimulated, over-heated, neryous American, who goes on eating the same amount of condensed food, regardless of the season or the physiological effect. In a land where all kinds of fruits are grown in such abundance all the year, it is well that necessity is rapidly increasing their use and proportionately decreasing the supply of animal food, this forwarding the march of civilization more rapidly.

Fruits are no more perishable than meats, and have the added advantage of being easily preserved in many ways, without lessening their dietetic value, though changing some of their most active principles, perhaps. Fresh, uncooked fruits should not be eaten in quantity after a hot meal, and for that reason are better served for breakfast fruit, or at luncheon, when they constitute the principal dish.

At present we have the strawberry, pineapple, grapefruit, banana, orange, and lemon in abundance, and at fairly reasonable prices. As all these fruits have a rich and pronounced flavor, one does not have to go to any great outlay in making a varied number of very dainty and appetizing des

Solved the Mystery.

Comrade Bill Thompson tells a story of bad writing that ranks with the Greeley classics. When he worked on phalt mixture. George Kennedy was could read it. One day Kennedy came

"It's all off," said he. "I've lost my punch. I read this thing of Kaufman's with perfect ease until I got half way Serve with cream sauce with Parms know why. The second half of his san cheese grated and sprinkled over stuff looks just like the first half, but I can't read it."

Thompson took that manuscript over to a corner. By and by Thompson came back with lines of strain

"Put it up to Kaufman," said he. "Either he's gone flooey or we have." "strip" of thick, sweet cream, dust So when Kaufman came in they gave him his manuscript and told him per, adding salt after they are baked, to go away somewhere and find out what it meant. By and by he came back, smiling.

"It was easy,' said he. "The sec-

Height of Americans. Measurements made of hundreds of thousands of native born Americans. dish of water, and with a sharp knife of all lines of ancestry, show that the average lies somewhere between 5 feet 71/2 inches and 5 feet 72-3. That is the mean height of the normal adult American male, and it is substantially the same, east, west, north and south. Now, how does this American compare with the men of other races? Is he larger or smaller? A study of the figure shows that only the Scotchman overtops him. The Swede, a tall. well made man, is nearly half an inch shorter. So is the north German. So is the Eikh, the tallest of all orientals. The Welshman is a full inch shorter. The Greek, the Turk, the Italian, the Russian and the Swiss are two inches shorter. The Pole is three Inches shorter, the Russian Jew is four. The Spaniard and the Hun full five inches shorter, scarcely come up to the American's nose.

Was Considered a Menace to State and Was Exiled.

publics, many centuries ago, as historians tell us, when a man rose to such a height of power or affluence that he became a possible menace to the state, the citizens took a vote on his case as "undesirable," says the Christian Herald. This was sent to the senate and, if the vote was sufficiently large and representative, that body passed a resolution in which the too distinguished citizen was invited. in polite diplomatic terms, to take a few years of retirement abroad-in other words, he was officially exiled for the good of the state. This was "ostracism," so called from the fact, it is explained, that the voting citizens wrote their names on oyster shells, and it was instituted as a measure of security to the commonwealth. Any citizen of great wealth or influence, or who had a large personal following which might, in an emergency, be used to the detriment of the state, was liable to receive this distinguished mark of public consideration, lt. was a kind of primitive "recall," which had the advantage of being equally applicable to "ins" and "outs."
